

## GIF assignment

You are to make a GIF in this class it is has to be at least 5 seconds and shorter than 15 seconds.

It would be nice if it was funny. (Do 10 minutes of research on the internet)

Sound cannot be synchronized effectively so it will be silent.

### Step 1

On A phone shoot a video, make it 16 by 9. (Hold the phone sideways).

### Step 2

Using Adobe Media Encoder convert your video (MOV or MP4) to FLV, remember where you save it.

### Step 3.

Open Adobe Flash and import your FLV and remember to “Embed” video on to timeline.

### Step 4

Put in affects including text, masks and other fun things that you have learned in TGJ2O.

(Marks are given here for effort and creativity)

On this step you will put effects on other layers that are **not** on the embedded layer.

### Step 5

Export your “Movie” to a GIF inside of Flash.

### Step 6

Drag your flash file onto chrome or Safari to watch your animation.
